My dear Mr Watson -

In my description  
of *Salix alba* - var *vitellina*  
strike out the words,

Var *Parnachiana* And, not  
*S. Parnachiana*, Bonatt; is a form  
of this with the old leaves ferruginous  
pubescent beneath.

As the Rhode Island plant  
so named by Andersson is staminate  
it can not be a form of *vitellina*  
of which we have only the ♀ - It  
is most likely one of the *alba* x *hybrid*  
*hybrids* - but need not be <sup>especially</sup> mentioned  
in a work of the character of the  
Manual -

Yours very truly  
W.S. Webb

There is a small note in the Manual that the  
male not alone in parts
